ABOUT ME

Full Stack Engineer with 6+ years of experience delivering scalable SaaS, Fintech, and AI-powered platforms. Production expertise in TypeScript, React, Node.js, and Python. Independently shipped four live AI products covering WhatsApp CRM with real-time messaging, RAG pipelines, GitHub App integrations, and ML analytics.

CORE PROJECTS

FundFlow — Fund Management Platform

01/2025 – Present

Next.js 15, TypeScript, NestJS, TypeORM, PostgreSQL, Python FastAPI, Socket.io, Claude AI, react-pdf, pdf-lib, ExcelJS, AWS

- Architected a full-stack fund management platform for General Partners and Limited Partners with role-based access, separate GP/LP portals, and JWT-secured multi-tenant data isolation.
- Built a DocuSign-style document signing system with drag-and-drop PDF field placement, signature capture via canvas, and signed PDF generation with audit certificates using pdf-lib.
- Engineered complete cap table management with share classes, shareholders, financing rounds, option pools, dilution modeling, waterfall analysis, and full audit log with undo support.
- Implemented capital call automation GP issues a call, system auto-allocates to all LPs based on ownership %, tracks individual LP payments, and updates fund-level called capital.
- Integrated Claude AI (Haiku) as a role-aware assistant GP queries portfolio performance, LP commitments, and capital call status in plain English; LP queries their own investments and distributions using live database context streamed via SSE.
- Built real-time notification system using Socket.io WebSocket gateway with JWT auth instant updates when LPs sign documents, reports are published, or distributions are processed.
- Delivered XLS report generation with yearly/quarterly/custom date ranges, GP publish-to-LP workflow, and cap table export across 5 sheets using ExcelJS.
- Built Python FastAPI ML service with Prophet forecasting, Isolation Forest anomaly detection, and portfolio health scoring integrated into the GP dashboard.
- Deployed full stack on Railway with PostgreSQL, NestJS API, Next.js frontend, and Python ML service; seeded with realistic demo data (5 LPs, 5 portfolio companies, capital calls, distributions).

LeadLoop-CRM

03/2026 – Present

Next.js 15, TypeScript, NestJS, PostgreSQL, Socket.io, Groq AI (Llama 3.3 70B), WhatsApp Business API, Stripe, Railway

- Architected a production-grade multi-tenant WhatsApp & Email CRM from scratch with full per-organisation data isolation using JWT authentication and NestJS role guards.
- Built real-time bidirectional messaging via Socket.io WebSockets enabling instant conversation updates across WhatsApp and Email channels without polling.
- Integrated WhatsApp Business API (Meta Graph API v25.0) for send/receive, webhook verification, auto-contact creation on inbound messages, and template message support.
- Implemented AI reply suggestions and pipeline auto-detection using Groq (Llama 3.3 70B), processing multilingual and Hinglish messages to automatically advance contacts through CRM stages.
- Engineered full Stripe billing integration with checkout sessions, subscription webhooks, plan-based feature gating (Free / Pro / Enterprise), and a customer self-service portal.
- Designed a five-stage sales pipeline (Lead → Contacted → Qualified → Converted → Lost) with real-time Kanban board and WebSocket-powered live stage updates.

- Delivered complete analytics dashboard with Recharts (area, bar, pie charts), sales funnel visualisation, real-time activity feed, and due-today reminders.
- Implemented dark/light theming with CSS custom properties across 30+ atomic components; full mobile-responsive layout with bottom navigation bar.
- Deployed full stack on Railway with separate PostgreSQL, backend, and frontend services; configured production Stripe and WhatsApp webhook endpoints.

CodeLens

03/2026 – 05/2026

Next.js 15, TypeScript, OpenAI GPT-4o, GitHub Apps API, PostgreSQL, Drizzle ORM, NextAuth.js, Railway

- Built a production-grade multi-tenant AI code review SaaS — users register, connect their GitHub repos via a GitHub App, and receive automated PR reviews within 30 seconds of opening a pull request.
- Engineered GitHub App webhook pipeline with HMAC signature verification, PR diff fetching via Octokit, language-aware GPT-4o-mini review with structured JSON output, and status checks that block merges on high severity findings
- Implemented real-time dashboard using Server-Sent Events (SSE) — new reviews stream to the UI instantly without page refresh; includes 14-day activity chart, severity filters, search, and live connection indicator
- Designed multi-tenant PostgreSQL schema with full per-user data isolation; JWT sessions via NextAuth.js; onboarding flow, high severity email alerts, rate limiting, and in-app re-review trigger

AgentFlow

01/2026 – 01/2026

Next.js 15, TypeScript, OpenAI, tRPC, PostgreSQL, pgvector, Drizzle ORM, NextAuth.js, Railway

- Built a full-stack AI agent SaaS — users create custom agents with system prompts, tools, and private knowledge bases agents stream responses token-by-token via Server-Sent Events.
- Implemented RAG pipeline using OpenAI text-embedding-3-small and pgvector — PDFs, CSVs, and text files are chunked, embedded, and retrieved via semantic similarity search at query time.
- End-to-end type-safe API with tRPC and Zod, agents use ReAct loop with Tavily Search for real-time web retrieval, persistent multi-turn chat history with streaming markdown responses per agent run

PulseVC

12/2025 – 02/2026

FastAPI, Python, Prophet, scikit-learn, Next.js 15, PostgreSQL, SQLAlchemy, OpenAI, Render

- Built an ML-powered VC portfolio analysis platform — investors upload CSV data and receive time-series forecasting, anomaly detection, clustering, and natural language Q&A over their portfolio companies.
- Facebook Prophet for 6-month revenue/ARR forecasting with confidence bands; Isolation Forest for anomaly scoring (0–100, healthy/watch/danger labels); KMeans clustering by financial similarity
- Natural language Q&A with GPT-4o-mini; deployed as FastAPI ML backend and Next.js 15 frontend with ReCharts visualizations, PostgreSQL on Render

WORK EXPERIENCE

NETSMARTZ, SENIOR SOFTWARE ENGINEER

01/2022 – 09/2022 | CHANDIGARH, INDIA

- Designed and developed REST APIs using Node.js, Express, MongoDB, and Redis for high-traffic applications, architected GitHub Actions CI/CD pipelines and Docker containerisation
- Optimised AWS infrastructure (EC2, ECS, Lambda) for cost efficiency and performance; maintained code quality with Jest unit and integration test suites across critical services

SMARTDATA ENTERPRISES, SENIOR ASSOCIATE LEVEL 1

07/2020 – 01/2022 | MOHALI, INDIA

- Led Node.js microservices backend development across multiple enterprise SaaS products; designed PostgreSQL and MongoDB schemas optimised for high-volume concurrent workloads
- Built React/TypeScript frontends with Redux for complex state management; managed AWS infrastructure (EC2, SQS, Lambda, ECS); configured GitLab CI/CD for zero-downtime deployments

VENTUREPACT, SOFTWARE DEVELOPER

03/2018 – 06/2020 | JALANDHAR, INDIA

- Developed full-stack B2B SaaS features using Angular, Node.js, and Express; integrated HubSpot, Salesforce, and Marketo via REST APIs for seamless CRM data synchronisation

- Built responsive modular frontend components with Angular; designed and implemented RESTful APIs with Express and automated testing pipelines

Nascenture, Software Developer 01/2017 – 02/2018 | Mohali, India

- Delivered full-stack web solutions using PHP, MySQL, JavaScript, and MongoDB for multiple client projects, designed and optimised relational and NoSQL database schemas

Netmax Technologies Private Limited, Web developer 05/2015 – 06/2016 | Chandigarh, India

- Started career building web applications using PHP, MySQL, HTML, CSS and JavaScript
- Developed client websites and small web-based tools as part of a project-based team
- Gained hands-on exposure to backend development, database management, and frontend basics
- Worked in a fast-paced agency environment delivering multiple client projects simultaneously

EDUCATION

MSC. INFORMATION TECHNOLOGY MANAGEMENT 08/02/2024 – 30/01/2026
Berlin School of Business and Innovation Berlin, Germany

- Coursework: Advanced Software Architecture, Cloud Computing, IT Project Management

B.TECH IN COMPUTER SCIENCE AND ENGINEERING 01/07/2011 – 31/05/2015 | India
Beant College of Engineering and Technology

- Major: Computer Science and Engineering

SKILLS

Languages TypeScript, JavaScript (ES2024), Python, SQL	Frontend React, Next.js 15 (App Router), Angular, Redux, TailwindCSS, Vite, tRPC	Backend Node.js, NestJS, Express.js, FastAPI, GraphQL, REST APIs, WebSockets, Zod	Databases PostgreSQL, pgvector, MongoDB, Redis, MySQL, Drizzle ORM, Prisma, SQLAlchemy
AI & ML OpenAI API (Chat + Embeddings), RAG pipelines, Vector search, Prophet, Isolation Forest, KMeans, scikit-learn	Cloud & DevOps AWS (EC2, ECS, Lambda, S3, SQS), Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Railway, Render	Architecture Microservices, Event-Driven, Serverless, Server-Sent Events, ReAct agent loop, GitHub Apps API	Auth & Security JWT, OAuth2, RBAC, NextAuth.js, HMAC webhook verification

LANGUAGE SKILLS

ENGLISH ENGLISH	GERMAN GERMAN -A2 (actively improving)
